CONTENTS

Volume 41, Issue Nos. 1–12 (2003)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 10 January

Announcement: Founding Editor Dr Philip M. Gresho: Nigel P. Weatherill and David K. Gartling 1

Numerical solution of steady free-surface flows by the adjoint optimal shape design method: E. H. van Brummelen and A. Segal 3

Vorticity-velocity formulation of the 3D Navier–Stokes equations in cylindrical co-ordinates: M. O. L. Hansen, J. N. Sorensen and W. Z. Shen 29

A convergent and universally bounded interpolation scheme for the treatment of advection: M. A. Alves, P. J. Oliveira and F. T. Pinho 47

Topology optimization of fluids in Stokes flow: T. Borrvall and J. Petersson 77

Issue No. 2, 20 January

A simple method for compressible multiphase mixtures and interfaces: N. Andrianov, R. Saurel and G. Warnecke 109

A new second-moment closure approach for turbulent swirling confined flows: P. Lu and V. Semião 133

Positivity-preserving, flux-limited finite-difference and finite-element methods for reactive transport: R. J. MacKinnon and G. F. Carey 151

Dynamic analysis of baffled fuel-storage tanks using the ALE finite element method: J. R. Cho and S. Y. Lee 185

Approximate simulation of stratospheric flow from aircraft data: M. Humi 209

Issue No. 3, 30 January

Solution of the hyperbolic mild-slope equation using the finite volume method: J. Bokaris and K. Anastasiou 225

Interface reconstruction with least-square fit and split Eulerian–Lagrangian Advection: R. Scardovelli and S. Zaleski 251

Equilibrium real gas computations using Marquina's scheme: Y. Stiriba, A. Marquina and R. Donat 275

The prediction of spatially periodic flows using a finite-volume model: T. El Soukkary and A. G. Straatman 303

Water quality control by bank placement based on optimal control and finite element method: T. Kurahashi and M. Kawahara 319

Issue No. 4, 10 February

A numerical method for inverse design based on the inverse Euler equations: A. Scascighini, A. Troxler and R. Jeltsch 339

Comparison of DES, RANS and LES for the separated flow around a flat plate at high incidence: M. Breuer, N. Jovičić and K. Mazaev 357

Estimating zero-*g* flow rates in open channels having capillary pumping vanes: R. Srinivasan 389

A domain decomposition approach to compute wave breaking (wave-breaking flows): A. Iafrati and E. F. Campana 419

Issue No. 5, 20 February

An implicit pseudo-spectral multi-domain method for the simulation of incompressible flows: P. Droll, M. Schäfer, E. Serre and P. Bontoux 447

Accurate multi-level schemes for advection: C. Kim 471

A fourth-order compact finite difference scheme for the steady stream function–vorticity formulation of the Navier–Stokes/Boussinesq equations: Z. Tian and Y. Ge 495

Application of the method of lines to unsteady compressible Euler equations: P. Šolín and K. Segeth 519

Artificial boundary method for the exterior Stokes flow in three dimensions: C. Zheng and H. Han 537

Interfacial transfer and averaging in Tryggvason's method: J. H. Ferziger 551

Issue No. 6, 28 February

Elastohydrodynamics of tensioned web roll coating process: M. S. Carvalho 561

A finite volume method for multicomponent gas transport in a porous fuel cell electrode: J. M. Stockie, K. Promislow and B. R. Wetton 577

Linear stability analysis of flow in a periodically grooved channel: T. Adachi and H. Uehara 601

LES of the flow past a rectangular cylinder using the immersed boundary concept: D. G. E. Grigoriadis, J. G. Bartzis and A. Goulas 615

Bulk viscosity damping for accelerating convergence of low Mach number Euler solvers: K. Mazaheri and P. L. Roe 633

PDF of distance function for level-set flamelet library modelling: P. Nilsson and X. S. Bai 653

Issue No. 7, 10 March

Development of highly accurate interpolation method for mesh-free flow simulations III. Analysis of accuracy and stability: N. Tanaka 675

Relaxation schemes for the shallow water equations: A. I. Delis and T. Katsaounis . . . 695

Potential flow around obstacles using the scaled boundary finite-element method: A. J. Deeks and L. Cheng 721

Neural networks for BEM analysis of steady viscous flows: N. Mai-Duy and T. Tran-Cong 743

Numerical simulation of thermo-solutal-capillary migration of a dissolving drop in a cavity: E. Bassano 765

Issue No. 8, 20 March

The use of dynamic grid adaptation algorithms for the modelling of flow around a circular cylinder in sub-critical flow regime: G. de With, A. E. Holdø and T. A. Huld . 789

Parallel finite element simulation of mooring forces on floating objects: S. Aliabadi, J. Abedi and B. Zellars 809

Rotary oscillations of axi-symmetric bodies in an axi-symmetric viscous flow with slip: Numerical solutions for sphere and spheroids: P. Tekasakul and S. K. Loyalka 823

Central schemes for open-channel flow: G. Gottardi and M. Venutelli 841

Validations of CFD against detailed velocity and pressure measurements in water turbine runner flow: H. Nilsson and L. Davidson 863

A new positive-definite regularization of incompressible Navier-Stokes equations discretized with Q1/P0 finite element: Y. Eguchi 881

Issue No. 9, 30 March

Numerical simulation and experimental visualization of the influence of the deformation frequency of a radically deforming circular cylinder impulsively started on cylinder wake: S. Hanchi, H. Oualli, R. Askovic and A. Bouabdallah 905

Convergence of steady and unsteady formulations for inviscid hovering rotor solutions: C. B. Allen 931

A Godunov method for the computation of erosional shallow water transients: L. Fraccarollo, H. Capart and Y. Zech 951

Parallel ILU preconditioning, *a priori* pivoting and segregation of variables for iterative solution of the mixed finite element formulation of the Navier-Stokes equations: S. Ø. Wille, Ø. Staff and A. F. D. Loula 977

The third-order polynomial method for two-dimensional convection and diffusion: P. Tkalich and Chan Eng Soon 997

Issue No. 10, 10 April

Three-dimensional transient free-surface flow of viscous fluids inside cavities of arbitrary shape: K.-T. Kim and R. E. Khayat 1021

Anisotropic Cartesian grid method for steady inviscid shocked flow computation: Zi-Niu Wu and Ke Li 1053

Numerical approximation of generalized Newtonian fluids using Powell–Sabin–Heindl elements: I. theoretical estimates: S.-S. Chow and G. F. Carey 1085

Large-eddy simulation with complex 2-D geometries using a parallel finite-element/ spectral algorithm: D. O. Snyder and G. Degrez 1119

Issue No. 11, 20 April

Simulation of shockwave propagation with a thermal lattice Boltzmann model: ShiDe Feng, Ping Dong, M. Tsutahara and N. Takada 1137

Development of an optimal hybrid finite volume/element method for viscoelastic flows: M. Aboubacar and M. F. Webster 1147

Numerical simulation of vortical ideal fluid flow through curved channel: N. P. Moshkin and P. Mounnamprang 1173

Riemann solvers and boundary conditions for two-dimensional shallow water simulations: V. Guinot 1191

A robust multi-grid pressure-based algorithm for multi-fluid flow at all speeds: M. Darwish, F. Moukalled and B. Sekar 1221

Issue No. 12, 30 April

Numerical simulation of disperse multiphase flows with an application in power engineering: K. Bernert, T. Frank, H. Schneider and K. Pachler 1253

Numerical method for calculation of the incompressible flow in general curvilinear co-ordinates with double staggered grid: A. Shklyar and A. Arbel 1273

A high-order mass-lumping procedure for B-spline collocation method with application to incompressible flow simulations: O. Botella 1295

Shock-capturing with natural high-frequency oscillations: Y. C. Zhou, Y. Gu and G. W. Wei 1319

On higher-order mixed FEM for low Mach number flows: application to a natural convection benchmark problem: V. Heuveline 1339
